

Power BI Assignment 2 – DAX & Data Visualization

E-Commerce Sales Analysis

Name: Meghna Manjesh

1. Data Loading

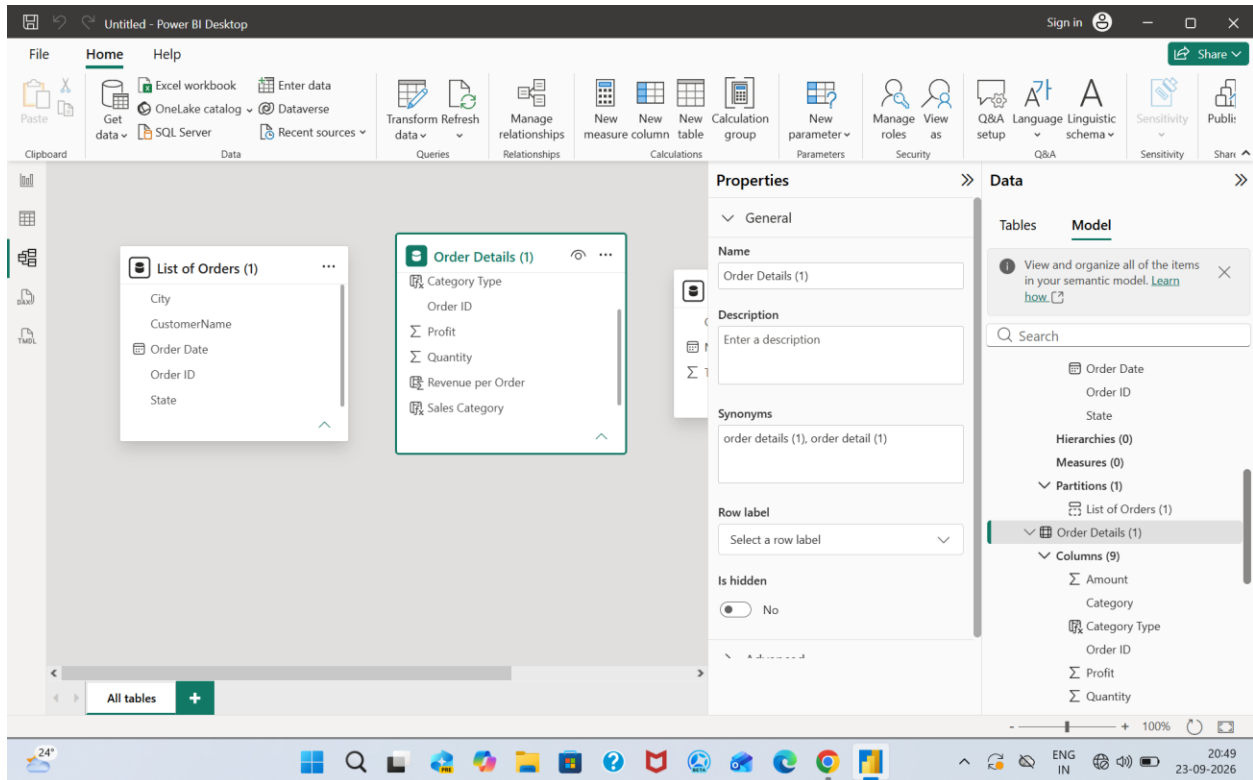

Changes Made:

Loaded the three datasets into Power BI:

- * List of Orders

- * Order Details

- * Sales Target

2. Data Modeling

Changes Made:

Created the required relationship between the order-related tables and prepared the data model for analysis.

3. Calculated Column – Category Type

Changes Made:

Created a calculated column called Category Type by combining Category and Sub-Category.

Formula:

Category Type = [Category] & " - " & [Sub-Category]

4. Calculated Column – Revenue per Order

Changes Made:

Created Revenue per Order by multiplying Amount by Quantity.

Formula:

Revenue per Order = [Amount] * [Quantity]

5. Calculated Column – Sales Category

Changes Made:

Created Sales Category to classify sales as Above Average or Below Average.

Formula:

Sales Category =

IF([Amount] > AVERAGE ('Order Details'[Amount]),

"Above Average",

"Below Average")

6. DAX Measures

Changes Made:

Created the required DAX measures:

- * Order Count

- * Average Profit in Delhi

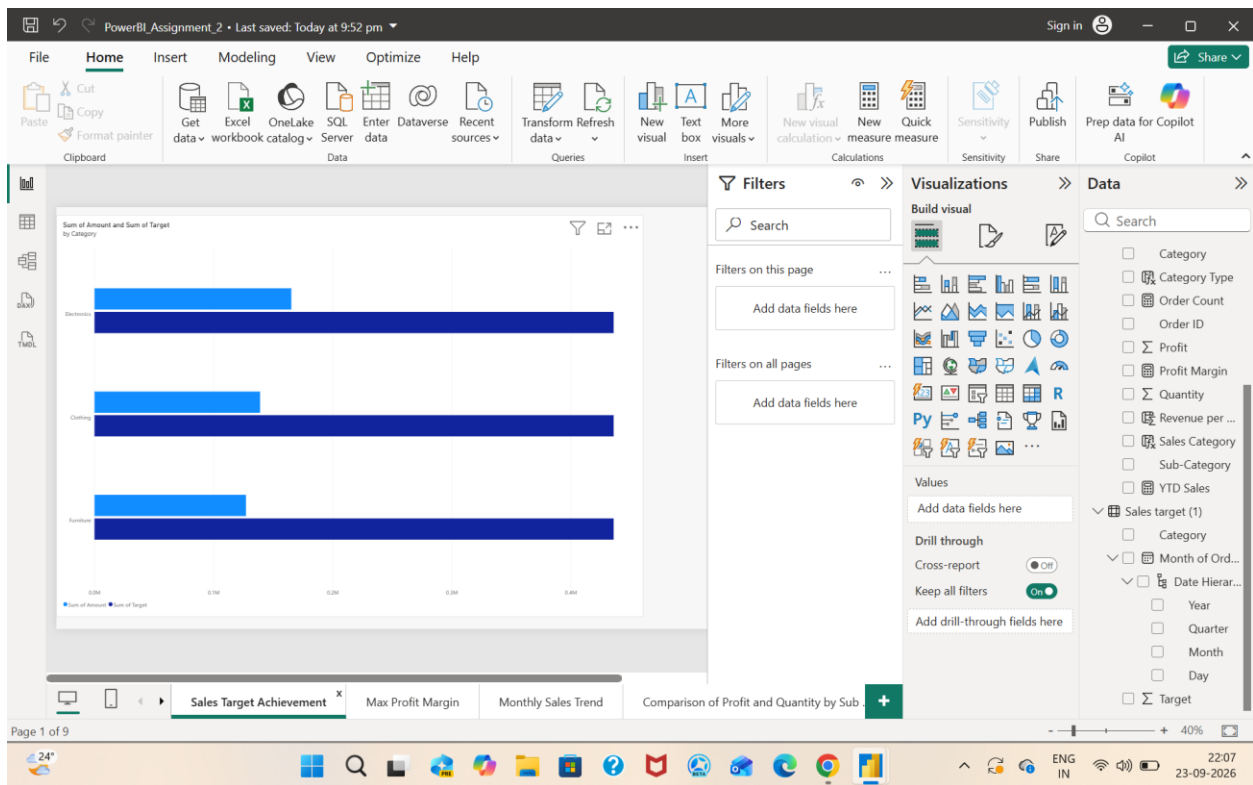

- * YTD Sales

- * Profit Margin

7. Sales Target Achievement by Category

Changes Made:

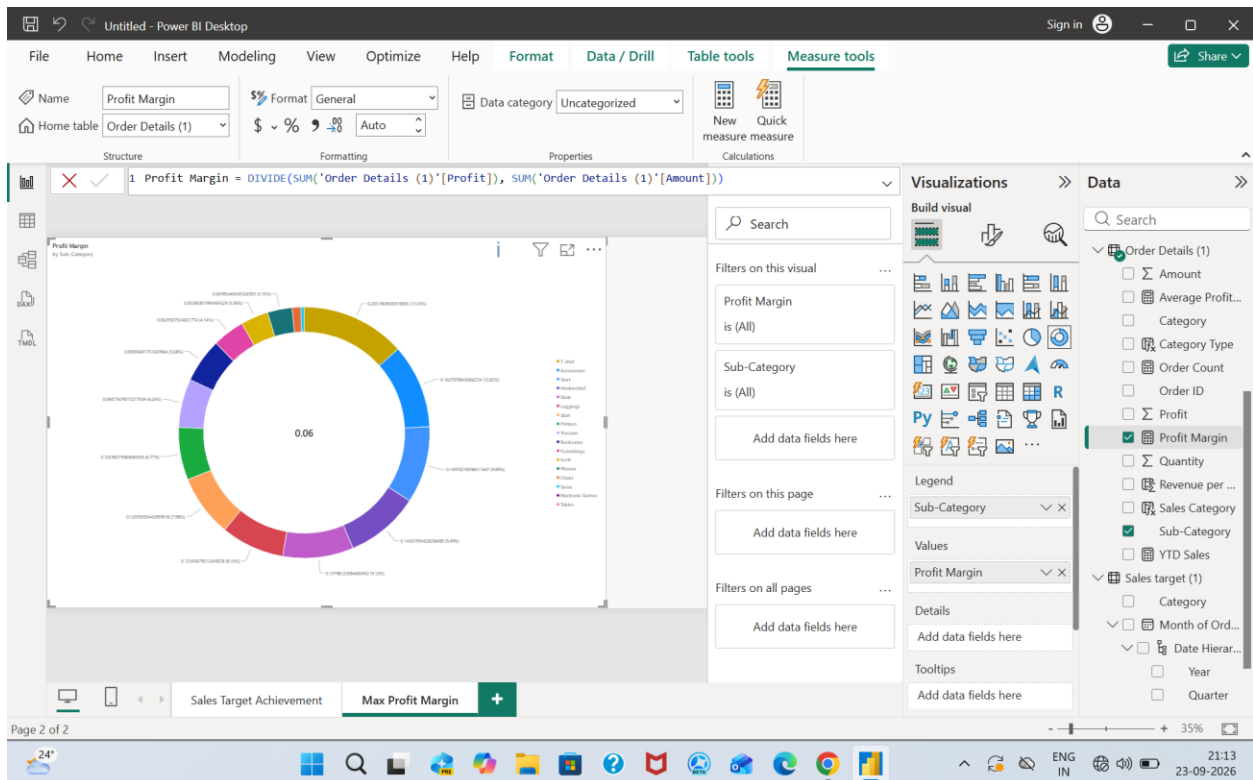

Create a Clustered Column Chart to compare actual sales with sales targets for each category.

8. Max Profit Margin by Sub-Category

Changes Made:

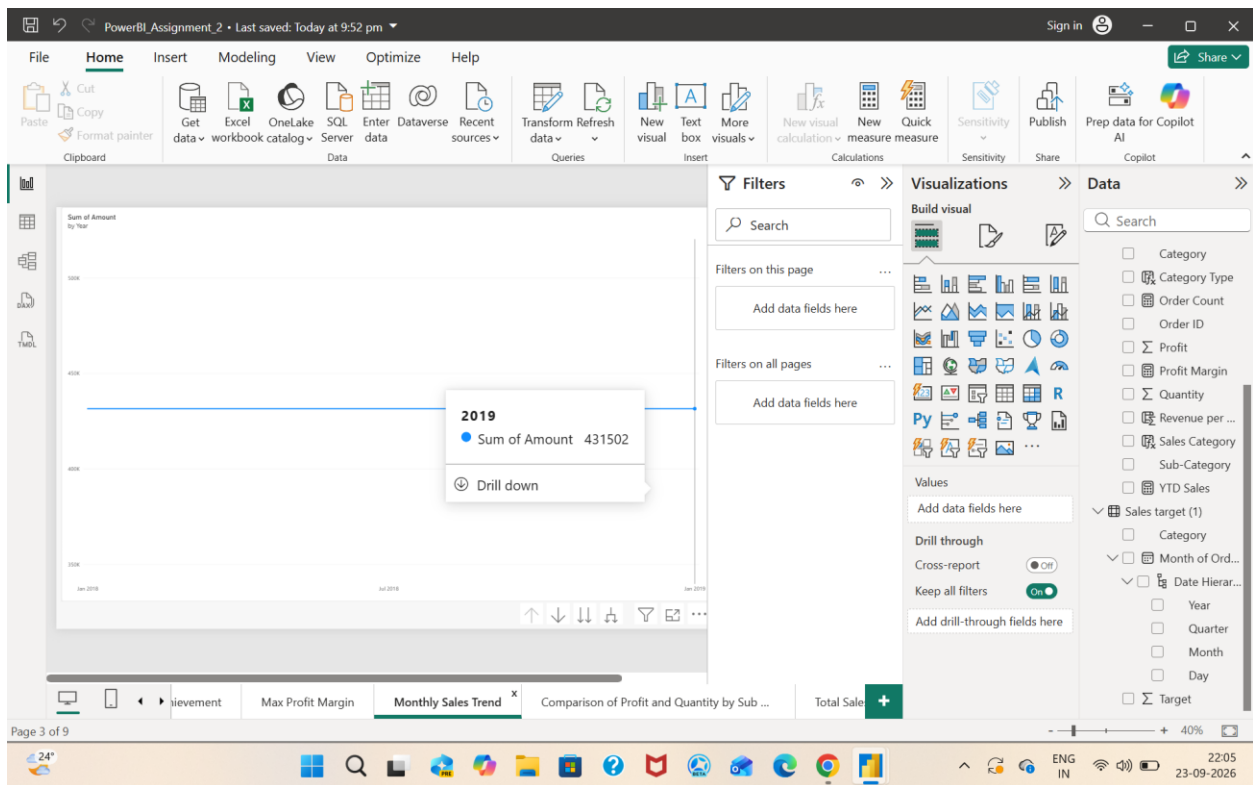

Created a Donut Chart showing profit margin by sub-category.

9. Monthly Sales Trend

Changes Made:

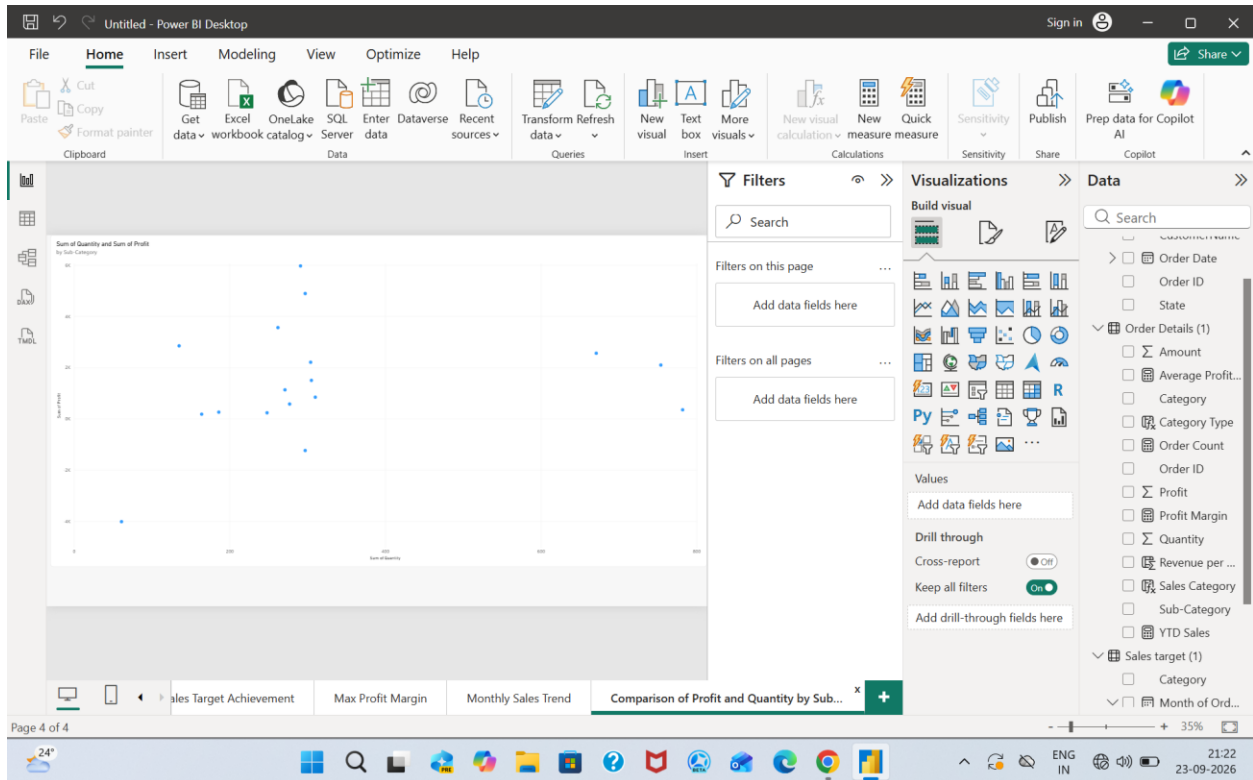

Created a Line Chart to display the monthly sales trend.

10. Comparison of Profit and Quantity

Changes Made:

Create a Scatter Chart to compare Profit and Quantity with Sub-Category.

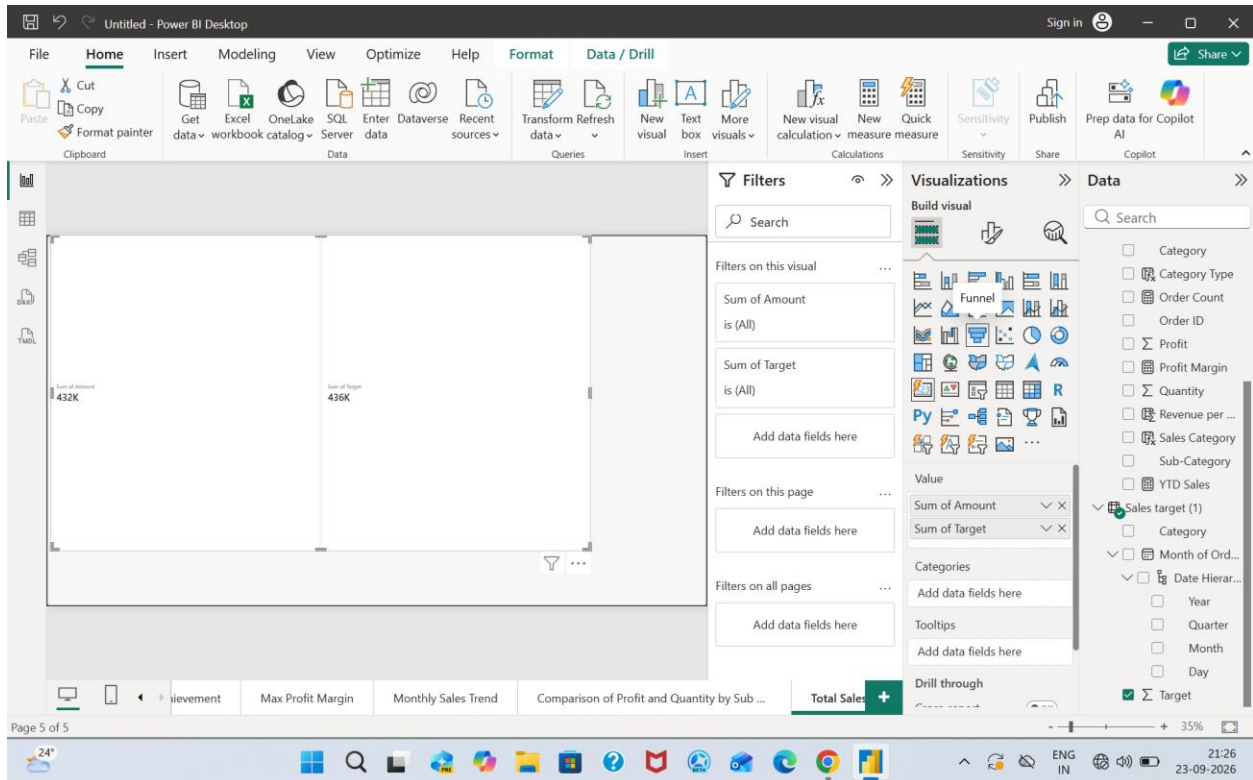

11. Total Sales Amount and Target

Changes Made:

Created cards to display:

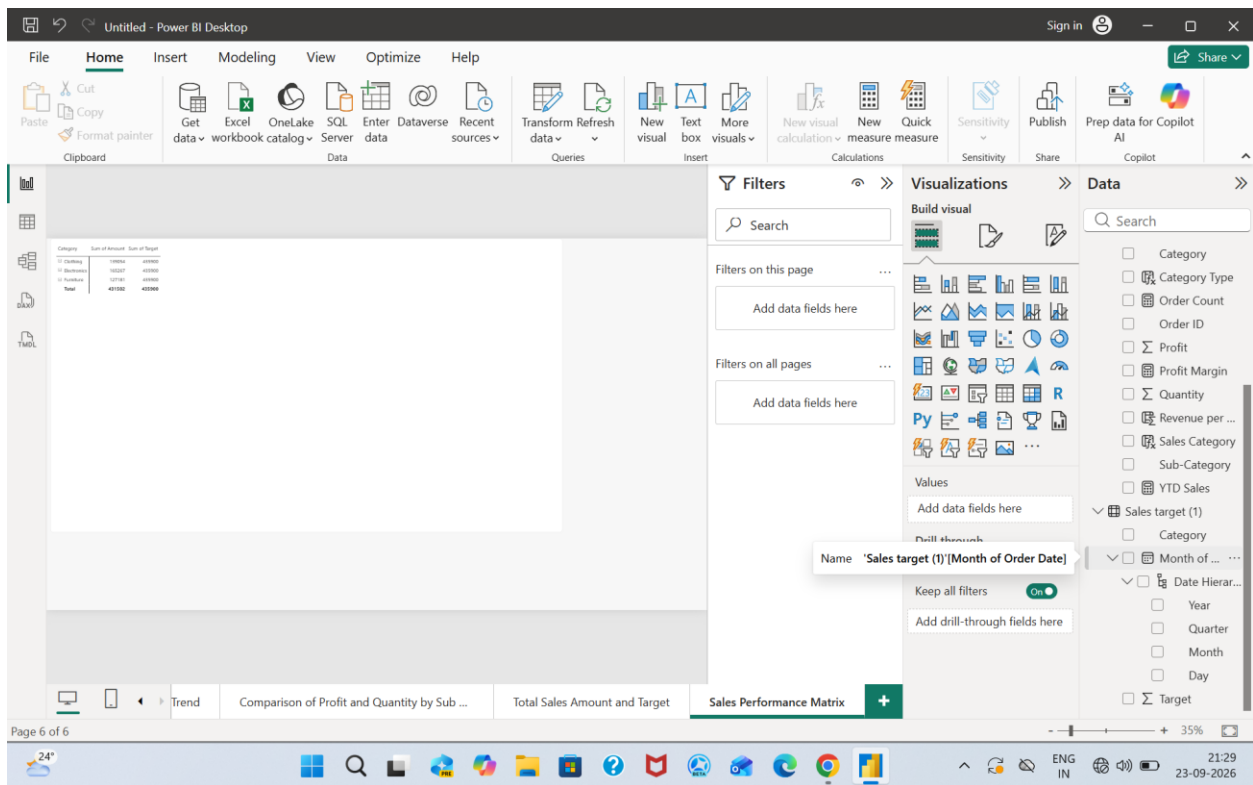

- * Total Sales Amount
- * Total Sales Target
- * Minimum Target

12. Sales Performance Matrix

Changes Made:

Created a Matrix to compare actual sales and targets across categories and months.

13. Geographic Sales Analysis

Changes Made:

Attempted to create a Map showing sales by city.

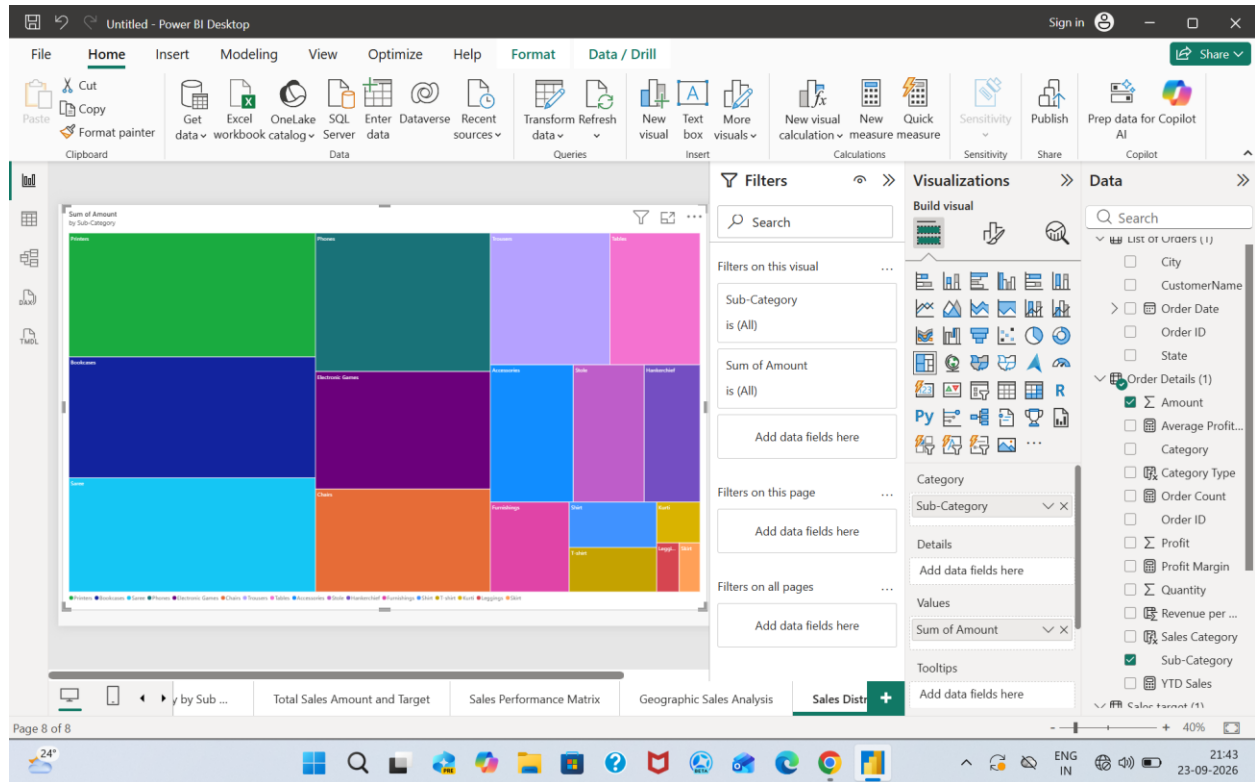

Note:

The Map visual was disabled by the Power BI organization/account settings, so the map could not be enabled.

14. Sales Distribution by Sub-Category

Changes Made:

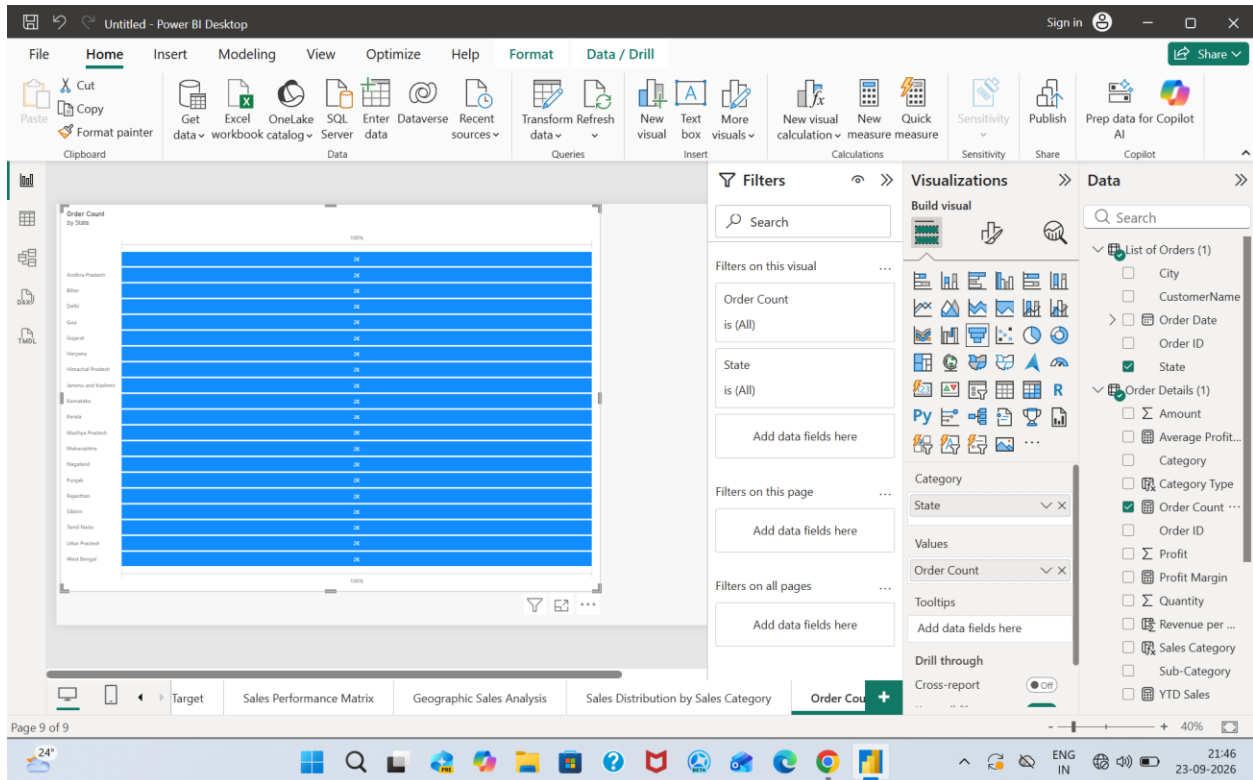

Created a Tree map to show sales distribution by sub-category.

15. Order Count Analysis by State

Changes Made:

Created a Funnel Chart showing order count by state.

16. Final Power BI Report

Changes Made:

Completed the Power BI report with the required DAX calculations and visualizations.
